# PALLADIUM

*The New White Gold !*

Palladium is a steel-white metal of the Platinum group of metals.  
It is a precious metal. Even though the price of one gram of pure gold  
is more than double the price of Palladium, it is much rarer than gold.  
Palladium has many of the same qualities of Platina or white gold  
at a much lower cost.

Therefore Palladium is rarer and more precious than white gold.  
It stays white forever, never needs to be rhodium plated, as opposed  
to white gold rings.

Palladium is white, hypo-allergenic, lightweight and durable.

*Palladium will probably be the new white gold.*

All the models in this catalogue are made in 18 Kt gold with diamonds.  
Most of the models in this catalogue are also available in Palladium.  
Ask your retailer for more information.
